A 56-page collection of formulae is included which can be useful as an aide-mémoire, even for teachers and researchers on those topics.

In this 2nd edition:

- 76 new problems
- a section devoted to a generalization of Gauss' Lemma
- a short novel section dealing with some properties of the energy of Hopf vector fields
- an expanded collection of formulae and tables
- an extended bibliography

Audience

This book will be useful to advanced undergraduate and graduate students of mathematics, theoretical physics and some branches of engineering with a rudimentary knowledge of linear and multilinear algebra.
