Stephen Hawking On Trial – Confronting the Big Bang

The genius of the wee Doctor behind the electronic voice on trial?

A mock trial puts Stephen Hawking on the witness stand to question his latest theory of the cosmos as an attorney would do in a courtroom:

1. Professor Hawking must defend the basis for his cosmological theories
2. The evidence must be beyond reasonable doubt; similar to the rationale for a jury to decide a case

Society doesn't thrive on uncertainty and that's why most scientific accounts of the universe eliminate much of the uncertainty.

For this very reason **Amazon bestselling author, Pierre St. Clair**, separates science fact from science fantasy.

"This is the best Science book that I've read in quite a while. I've been aware of the criticisms of Hawking's work. A Science book that views Hawking's work and statements critically in a clear concise manner." H. Lipman - Pennsylvania

Stephen Hawking On Trial unleashes a critical expose of today's crisis in astrophysics

- What we factually know and do not know about the cosmos
- The question that is never asked but must be answered
- The five biggest myths unsupported by observation or data
- The essential initiative in cosmology that is being neglected
- Hypotheses lacking data are presented as relevant theories

Considering the facts, an unbiased investigator may reasonably say: "Let's have a look at the evidence."

Author St Clair, an investigative journalist whose job is to inform the public, reveals what's really happening behind the headlines.

His work provides an in-depth analysis of Stephen Hawking's Grand Design Theory which concedes that the Big Bang model of the universe is dead.

Physicists do not understand Gravity the most common force in nature

Stephen Hawking On Trial challenges physicists who misapply Gravity to support their new hypotheses.

St. Clair reveals that Newtonian physics, General Relativity, Quantum Mechanics, and String Theory are still unable to understand the cause of gravitational force.

NASA physicists admit 96% of the matter and energy in the universe is a mystery
Even though only 4% of the universe is known, Stephen Hawking declares, "The scientific account is complete," on a national TV broadcast.

"Hawking and a few others are doing a disservice to science by exaggerating what we know and therein confusing the public. This book sets the record straight." D. Friedmann - Canada

Can our modern scientific account be complete if science only understands 4% of the universe?

Cosmologists portray accounts of the universe as scientific (supported by evidence) but are mostly a cloud of caveats and probabilities.

Clearly, cosmology and certainty are not in sync.

"As a scientist and as an educator, I like the idea that we believe things because there's evidence."

Oxford University Professor Richard Dawkins

"This is the first book that has assembled the origins of cosmology as evidence like opposing counsels. Readers can weigh testimonies as a judge who demands rigorous arguments and proofs. St. Clair has the detached presence of mind to act as both scales of justice." – D. M. Shapiro, Los Angeles
