Globular Clusters (Cambridge Contemporary Astrophysics)

Globular Clusters (Cambridge Contemporary Astrophysics)

Globular clusters are spherical, densely packed groups of stars found around galaxies. They are thought to have formed at the same time as their host galaxy and thus provide a powerful probe for understanding galaxy evolution, as well as being studied as objects of interest in their own right. This volume presents invited articles by a team of world leaders who gathered at the X Canary Islands Winter School of Astrophysics to review our current understanding of globular clusters. It provides an accessible introduction to the field for graduate students, and a comprehensive and up-to-date reference for researchers.
