## The Gender and Science Reader

*The Gender and Science Reader* brings together key writings by leading scholars to provide a comprehensive feminist analysis of the nature and practice of science. Challenging the self-proclaimed objectivity of scientific practice, the contributors uncover the gender, class and racial prejudices of modern science. The Reader draws from a range of media, including feminist criticism, scientific literature, writings about scientific education, and the popular press. Articles are grouped into six thematic sections which address:

- \* Women in Science - women's access to study and employment in science, combining both analytical evidence and personal testimonies
- \* Creating Andocentric Science - exploring the gendered origins of science at the time of the Enlightenment
- \* Analyzing Gendered Science - feminist methodologies and epistemology for the study of science
- \* Gendered Praxis - examples of how gender bias can affect and distort scientific work
- \* Science and Identity - how science reinforces gender and racial stereotypes
- \* Feminist Re-Structuring of Science - what is the future of feminist science studies?

In addition to a general introduction by the editors to the volume, and introductions to each of the thematic sections, the Reader also includes a comprehensive bibliography of feminist science studies, making it an indispensable resource for anyone involved in the teaching, research or study of science.
