Gravity, a Geometrical Course: Volume 2: Black Holes, Cosmology and Introduction to Supergravity
Pietro Giuseppe Frè

'Gravity, a Geometrical Course' presents general relativity (GR) in a systematic and exhaustive way, covering three aspects that are homogenized into a single texture: i) the mathematical, geometrical foundations, exposed in a self consistent contemporary formalism, ii) the main physical, astrophysical and cosmological applications, updated to the issues of contemporary research and observations, with glimpses on supergravity and superstring theory, iii) the historical development of scientific ideas underlying both the birth of general relativity and its subsequent evolution. The book is divided in two volumes.

Volume Two covers black holes, cosmology and an introduction to supergravity. The aim of this volume is two-fold. It completes the presentation of GR and it introduces the reader to theory of gravitation beyond GR, which is supergravity. Starting with a short history of the black hole concept, the book covers the Kruskal extension of the Schwarzschild metric, the causal structures of Lorentzian manifolds, Penrose diagrams and a detailed analysis of the Kerr-Newman metric. An extensive historical account of the development of modern cosmology is followed by a detailed presentation of its mathematical structure, including non-isotropic cosmologies and billiards, de Sitter space and inflationary scenarios, perturbation theory and anisotropies of the Cosmic Microwave Background. The last three chapters deal with the mathematical and conceptual foundations of supergravity in the frame of free differential algebras. Branes are presented both as classical solutions of the bulk theory and as world-volume gauge theories with particular emphasis on the geometrical interpretation of kappa-supersymmetry. The rich bestiary of special geometries underlying supergravity lagrangians is presented, followed by a chapter providing glances on the equally rich collection of special solutions of supergravity.

Pietro Frè is Professor of Theoretical Physics at the University of Torino, Italy and is currently serving as Scientific Counsellor of the Italian Embassy in Moscow. His scientific passion lies in supergravity and all allied topics, since the inception of the field, in 1976. He was professor at SISSA, worked in the USA and at CERN. He has taught General Relativity for 15 years. He has previously two scientific monographs, "Supergravity and Superstrings" and "The N=2 Wonderland", He is also the author of a popular science book on cosmology and two novels, in Italian.

From reader reviews:

Francisco Gentry:

This Gravity, a Geometrical Course: Volume 2: Black Holes, Cosmology and Introduction to Supergravity book is just not ordinary book, you have after that it the world is in your hands. The benefit you obtain by reading this book will be information inside this publication incredible fresh, you will get details which is getting deeper an individual read a lot of information you will get. That Gravity, a Geometrical Course: Volume 2: Black Holes, Cosmology and Introduction to Supergravity without we know teach the one who looking at it become critical in thinking and analyzing. Don't possibly be worry Gravity, a Geometrical Course: Volume 2: Black Holes, Cosmology and Introduction to Supergravity can bring any time you are and not make your tote space or bookshelves' turn out to be full because you can have it in your lovely laptop even cellphone. This Gravity, a Geometrical Course: Volume 2: Black Holes, Cosmology and Introduction to Supergravity having very good arrangement in word and also layout, so you will not feel uninterested in reading.

Eric Freeman:

The particular book Gravity, a Geometrical Course: Volume 2: Black Holes, Cosmology and Introduction to Supergravity has a lot details on it. So when you make sure to read this book you can get a lot of gain. The book was written by the very famous author. Mcdougal makes some research prior to write this book. This specific book very easy to read you can find the point easily after perusing this book.

Ann Bland:

The book untitled Gravity, a Geometrical Course: Volume 2: Black Holes, Cosmology and Introduction to Supergravity contain a lot of information on this. The writer explains your girlfriend idea with easy way. The language is very easy to understand all the people, so do certainly not worry, you can easy to read this. The book was written by famous author. The author brings you in the new period of literary works. You can easily read this book because you can please read on your smart phone, or gadget, so you can read the book within anywhere and anytime. If you want to buy the e-book, you can open up their official web-site in addition to order it. Have a nice examine.

Brenda Burrows:

Beside this kind of Gravity, a Geometrical Course: Volume 2: Black Holes, Cosmology and Introduction to Supergravity in your phone, it can give you a way to get nearer to the new knowledge or details. The information and the knowledge you can got here is fresh from your oven so don't become worry if you feel like an outdated people live in narrow commune. It is good thing to have Gravity, a Geometrical Course: Volume 2: Black Holes, Cosmology and Introduction to Supergravity because this book offers for you readable information. Do you occasionally have book but you would not get what it's about. Oh come on, that wil happen if you have this inside your hand. The Enjoyable option here cannot be questionable,

including treasuring beautiful island. Techniques you still want to miss this? Find this book along with read it from right now!
